EDUCATION

University

Bachelor of Computer Science, Minor in Full Stack Development

Australia

July 2024 – Present

College

Diploma in Computer Science (Focused in Data Science)

Malaysia

Jan. 2022 – April 2024

EXPERIENCE

Application Developer Intern

Large company

March 2026 – Present

Australia

- Adapted quickly to legacy Ruby on Rails codebase.
- Efficiently resolved Jira tickets including application changes and bug fixes.

Full Stack Developer (Part Time)

Startup

Dec. 2024 – Feb. 2024

Malaysia

- Developed full-stack websites using Astro, Payload CMS and Hono, delivering high-performance, content-driven client solutions.
- Automated deployment pipelines using GitHub Actions CI/CD, optimizing cloud infrastructure reliability and reducing manual overhead.
- Engineered SEO-optimized architectures, resulting in improved search rankings and increased organic traffic for client websites.

Frontend Web Developer Intern

Startup

Jan. 2024 – April 2024

Kuala Lumpur, Malaysia

- Developed responsive WordPress sites and Next.js applications, translating design requirements into functional web interfaces.
- Collaborated in an agile environment with UI/UX designers and backend engineers to ensure seamless feature integration and design fidelity.
- Enhanced performance by implementing lazy loading and asset optimization, significantly reducing initial page load times.

PROJECTS

Coworking Stream Guide Website | *Astro, TailwindCSS, Typescript, Markdown*

- Developed website to guide people how to do coworking streams on Twitch and YouTube.
- 800+ visits per month with 300+ unique visitors
- Written in Markdown and MDX to allow for easy editing from open source contributors.

Portfolio Roast Bot | *Rust, SQLite, Forgejo Actions, Docker*

- Built a high-performance Discord bot in Rust utilizing slash commands to provide automated portfolio reviews and web development tips.
- Deployed the bot to a community of 5,000+ members, maintaining stability and low-latency responses under consistent active load.
- Automated deployment workflows via Forgejo Actions, implementing continuous delivery to build and ship production binaries from the main branch.
- Developed a moderation engine to monitor forum threads, programmatically enforcing server-wide tagging rules and organizational standards.
